Sommario/riassunto	The use of external prestressing is becoming more popular throughout Europe due to their expected higher durability and the possibility of active maintenance of the prestressing cables. Questions have been raised about the behaviour of these structures beyond service loads. A comprehensive numerical analysis has been carried out comparing the behaviour of three different types of externally prestressed bridges to a conventionally internally prestressed bridge. The external types are a monolithically built bridge with external tendons, a monolithically built bridge with external tendons and

## Sommario/riassunto

"In A Monetary and Political History of the Phoenician City of Byblos, the Elayis' tour de force is the coin catalog, which introduces 1,662 silver Byblian coins, also displayed in 25 pp. of photos. Besides the usual numismatic analysis (monetary production, number of issues, manufacturing techniques, and processes), this impressive volume provides information on monetary inscriptions and iconography and on the history of Byblos. Significantly, it reveals new information on the Persians' western policy and the history of the other Phoenician cities as well as on craftsmen in the Levant, and thus the book is an indispensable reference for understanding coin circulation, trading exchanges, and even the wars that occurred with the Greeks, Cypriots, and Egyptians in the Phoenician eastern Mediterranean"--Provided by publisher
