Record Nr. UNINA9910787156903321

Titolo The effects of commuting on pilot fatigue / / Committee on the Effects

of Commuting on Pilot Fatigue [and four others]

Pubbl/distr/stampa Washington, District of Columbia:,: The National Academies Press,,

2011 ©2011

ISBN 0-309-21699-0

0-309-21697-4

Descrizione fisica 1 online resource (207 p.)

Disciplina 616.980213

Soggetti Air travel - Health aspects

Air travel - Safety measures

Air pilots

Lingua di pubblicazione Inglese

Formato Materiale a stampa

Livello bibliografico Monografia

Note generali Description based upon print version of record.

Nota di bibliografia Includes bibliographical references.

Sommario/riassunto Nearly everyone experiences fatigue, but some professions--such as

aviation, medicine and the military--demand alert, precise, rapid, and well-informed decision making and communication with little margin for error. The potential for fatigue to negatively affect human

performance is well established. Concern about this potential in the aviation context extends back decades, with both airlines and pilots agreeing that fatigue is a safety concern. A more recent consideration is whether and how pilot commuting, conducted in a pilot's off-duty time, may affect fatigue during flight duty. In summer 2010 the U.S. Congress directed the Federal Aviation Administration (FAA) to update the federal regulations that govern pilot flight and duty time, taking into account recent research related to sleep and fatigue. As part of their directive, Congress also instructed FAA to have the National Academy of Sciences conduct a study on the effects of commuting on pilot fatigue. The book reviews research and other information related

to the prevalence and characteristics of commuting; to the science of

sleep, fatigue, and circadian rhythms; to airline and regulatory

oversight policies; and to pilot and airline practices. Also discusses the policy, economic, and regulatory issues that affect pilot commuting, and outlines potential next steps, including recommendations for regulatory or administrative actions, or further research by the FAA.
