Sommario/riassunto	"Provides a multi-method, integrated analysis of news production and news audiences, including a long-term study of community activists in a central Canadian city. During the seven-year fieldwork period, different groups of research participants completed questionnaires, wrote news diaries, and were interviewed in their homes while viewing network television newscasts. Clarke shows that frustrations with the informational limitations of television and other news media are

accelerated among women and working-class news users who are often without opportunities to access alternative information sources."--
