

1. Record Nr.	UNINA9910787571803321
Autore	Omelyanenko Nikolay
Titolo	Connective tissue : histophysiology, biochemistry, molecular biology // Nikolay Omelyanenko, Leonid Slutsky ; Sergey Mironov, editor
Pubbl/distr/stampa	Boca Raton, FL : , : CRC Press, , [2014] ©2014
ISBN	0-429-17118-8 1-4822-0358-8
Descrizione fisica	1 online resource (630 p.)
Disciplina	611.0182
Soggetti	Connective tissues Connective tissue cells
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Cover; Contents; Authors Information; Introduction; Chapter 1: Peculiarities of Connective Tissue Histophysiology, Biochemistry and Molecular Biology; Chapter 2: Cellular Elements of Connective Tissue; Chapter 3: Extracellular Matrix of Connective Tissue: Histophysiology, Biochemistry and Molecular Biology; Chapter 4: Regulation of Connective Tissue Metabolic Functions; Chapter 5: Biochemical and Molecular Mechanisms and Manifestations of Connective Tissue Aging; Chapter 6: Bone - An Organ of the Support and Locomotor Apparatus Containing all Types of Connective Tissue Chapter 7: Cartilage - Cartilaginous Tissue: Structural, Biochemical and Molecular Biological Characteristics Chapter 8: Bone Tissue: The Structural-Functional, Biochemical and Biomolecular Characteristics of its Components; Chapter 9: Biochemical Characteristics of Synovial Membrane and Synovia; Chapter 10: Molecular Biological and Biochemical Regularities of Connective Tissue Structures Ontogenesis; References; List of Abbreviations; Color Insert; Back Cover
Sommario/riassunto	Connective tissue is a multicomponent, polyfunctional complex of cells and extracellular matrix that serves as a framework for all organs, combining to form a unified organism. It is a structure responsible for numerous vital functions such as tissue-organ integration,

morphogenesis, homeostasis maintenance, biomechanical support, and more. The regeneration potential of connective tissue affects healing of damaged tissue and organs, while trauma, stress, and other factors that cause damage to connective tissue can lead to numerous disorders. Connective Tissue: Histophysiology, Bio
