Titolo	The fundamentals of money and financial systems [[electronic resource] /] / Shahdad Naghshpour
Pubbl/distr/stampa	[New York, N.Y.] (222 East 46th Street, New York, NY 10017), : Business Expert Press, 2013
ISBN	1-60649-485-6
Edizione	[1st ed.]
Descrizione fisica	1 online resource (164 p.)
Collana	Economics collection, , 2163-7628
Disciplina	332.4
Soggetti	Money Finance
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Part of: 2013 digital library.
Nota di bibliografia	Includes bibliographical references (p. 129-132) and index.
Nota di contenuto	Section I. Demand for money -- 1. The quantity theory -- 2. Transaction theory of demand for money -- 3. Portfolio balances -- 4. Money theories and estimation -- Section II. Supply of money -- 5. Federal Reserve System -- 6. Forms of money in the economy -- Section III. The role of interest rate -- 7. Rate of return and interest rate -- 8. Determining the interest rate -- 9. The role of risk on the interest rate -- Section IV. Financial systems -- 10. Components of the financial system -- 11. Equilibrium in the goods market: IS model -- 12. Equilibrium in the financial system: LM model -- 13. Conclusion -- Notes -- Glossary -- References -- Index.
Sommario/riassunto	It is impossible to comprehend what policies the government should undertake to face the economic reality of the country. Every day the public is exposed to a barrage of recommendations and mandates from the left and the right concerning what would be the appropriate course of action or lack thereof in order to nullify economic ills or to bring prosperity to the country. A fundamentally basic requirement to being able to comprehend these claims is the knowledge of money. It is important to understand the meaning of money and be able to differentiate between basic concepts such as consumption, savings, capital, and investment. Would it make any difference, to the overall function of the economy, earnings, employment, etc. if a given sum of money is spent by an individual, a small business, a corporation, or the

government? Is it good for the country if people spend money or is it better if they save it? Would it make a difference if spending originates from printing money or citizens' savings? The answer to these and many other economic questions are at the heart of the fiscal and monetary policy that every government grapples with every day. It is essential to know the role of money and how it fits into the answers to these and other policy questions. This book provides the necessary foundations for understanding money and many of its functions, roles, and uses in economic theories that are essential to comprehend economic theories needed for formulation of fiscal and monetary policies. This book is not a textbook to be used in a course in money and banking in a typical economic program. It is written for executives and decision makers who need to comprehend the meanings of different policies and how they affect their decisions in their business or private life but cannot even begin the process because they are unaware of the basic block of fiscal and monetary policy, namely money. Many people use the words like capital, savings, and investments interchangeably or as close substitutes. However, each one has a specific meaning and purpose in economics. After reading this book you will be ready to understand the fiscal and monetary policies, tools, and effectiveness.

Nota di contenuto	Session 1A: IR Models -- Session 1B: Image Retrieval -- Session 1C: Text Classification -- Session 1D: Chinese Language Processing -- Session 1E: Text Processing -- Session 1F: Application of IR -- Session 2A: Machine Learning -- Session 2B: Taxonomy -- Session 2C: IR Models -- Session 2D: Information Extraction -- Session 3A: Summarization -- Session 3B: Multimedia -- Session 3C: Web IR -- Session 3D: Text Clustering -- Poster Session.

This book constitutes the thoroughly refereed post-conference proceedings of the 4th Asia Information Retrieval Symposium, AIRS 2008, held in Harbin, China, in May 2008. The 39 revised full papers and 43 revised poster papers presented were carefully reviewed and selected from 144 submissions. All current issues in information retrieval are addressed: applications, systems, technologies and theoretical aspects of information retrieval in text, audio, image, video and multi-media data. The papers are organized in topical sections on IR models image retrieval, text classification, chinese language processing, text processing, application of IR, machine learning, taxonomy, IR methods, information extraction, summarization, multimedia, Web IR, and text clustering.
