Sommario/riassunto

Michael Trimble and Bettina Schmitz have assembled a multi-national team of experts to review the most recent findings and explore the interface between epilepsy and behaviour disorders. They begin by looking at the classifications available and examine how adequate they are for defining the subtleties of behavioural changes in patients with neurological disorders. Coverage is broad-ranging, from related cognitive problems, the biological underpinnings and pseudoseizures, to clinical aspects and treatment issues. There has been a great deal of research in this area over recent years, but limited published reviews. This timely book covers the practical implications of ongoing research, and offers both a diagnostic and management perspective. It will be essential reading for all professionals engaged in the treatment of epileptic patients.

Successful transition from school to adult life has always been difficult for people with disabilities, especially in the area of employment. The vast majority of people with disabilities are either unemployed or underemployed with low wages and few benefits, and many governments are struggling to find a way of providing employment and benefits to people with disabilities without creating disincentives to work.
