Sommario/riassunto

Latin America's population is aging, and many among the growing elderly population are not protected by traditional pension schemes. In response, policy makers have been reevaluating their income protection systems so that between 2000 and 2013, the majority of Latin American countries reformed their social pension schemes to provide near-universal coverage for the elderly. Before this unprecedented wave of reform, most income protection in Latin America was provided through contributory pensions available only to formal sector workers. Considering that informal and unpaid employment character
