Effects of globalization -- Globalization and the challenges of the New World Order -- The political economy of HIV/AIDS -- Terrorism and its risks -- Effects of terrorism in America: challenges to national security -- The global energy security -- Deconstructive critique: the new paradigm.
Sommario/riassunto	Globalization: The Paradox of Organizational Behavior is an excellent resource for undergraduate and graduate students, professors, policy makers, and the intelligentsia worldwide. Sagini explores the text's major themes using historical, materialistic, and imperialistic factors.

The globalization movement is shaped by economic, political, technological, and cultural forces that transform human collectivities. Instability and related concomitant issues such as disease, energy security, and terrorism challenge the reconstructive role of internal and external factors in foreign policy decision-making. The implications of the global forces on the divided world of gated communities, urban and village ghettos, national borders, and cultural decay could be far-reaching if leaders fail to redesign and implement effective governance models.
