Descrizione fisica	38 p. : ill
Collana	IMF Working Papers
Altri autori (Persone)	FloodRobert MarionNancy
Soggetti	Globalization Financial risk Finance: General Macroeconomics Macroeconomics: Consumption Saving Wealth Aggregate Factor Income Distribution Macroeconomics: Production General Financial Markets: General (includes Measurement and Data) Finance Consumption Income Production growth Private consumption Emerging and frontier financial markets Economics Production Economic theory Financial services industry Japan
Lingua di pubblicazione	Inglese

Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	Though theory suggests financial globalization should improve international risk sharing, empirical support has been limited. We develop a simple welfare-based measure that captures how far countries are from the ideal of perfect risk sharing. We then take it to data and find international risk sharing has, indeed, improved during globalization. Improved risk sharing comes mostly from the convergence in rates of consumption growth among countries rather than from synchronization of consumption at the business cycle frequency. Our finding explains why many existing measures fail to detect improved risk sharing-they focus only on risk sharing at the business cycle frequency.
