Sommario/riassunto	Le corps est ici objet d'étude : en tant que lieu d'un savoir médical, physique, philosophique, il invite à scruter les modalités de sa

représentation et l'imaginaire qu'il recouvre. De l'homme astronomique à l'imagerie médicale actuelle, en passant par les planches anatomiques « artistes » en même temps que scientifiques des xviiie et xviiiie siècles, il témoigne plus que d'autres objets d'une évolution de l'imaginaire comme de l'épistémé. Par ailleurs, le corps est lui-même objet métaphorique qui peut constituer et organiser un discours. Le corpus philosophique, le corps de l'Église ou le corps politique en sont des exemples évidents. À partir du moment où le corps est lui-même un élément constituant du savoir, c'est non seulement le discours qu'il structure et véhicule qu'il faut analyser, mais la représentation même du corps qui est implicitement à l'œuvre. Fruit d'une rencontre pluridisciplinaire de Cerisy, ce volume explore les figures du corps dans le savoir et l'imaginaire du savoir, de l'Antiquité à nos jours.

Sommario/riassunto	This paper tests the association between the Gulf Cooperation Council (GCC) countries' financial and remittance outflows and regional growth in the Middle East. The findings, based on 35-year panel data, indicate that growth rates of real GDP, private consumption and private investment in regional countries are strongly associated with remittance outflows from and the accumulation of financial surpluses in the GCC. Unlike in other developing and emerging market countries, growth in regional countries is not influenced by growth in the North, and is not export led. Linkages with the GCC could help sustain output growth in the regional countries in the face of the global economic slowdown and oil price shocks and could provide diversification gains to international capital seeking markets uncorrelated with Northern and emerging market countries.
