Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Contents; I. Introduction; II. Literature Review; III. Econometric Model; A. Latent treatment of remittances; B. Labor supply model; C. Background and Data Description; IV. Model Specification and Estimation; A. Equation Specification; B. Model Estimation; V. Conclusions; Tables; 1. Joint Model Estimation; 2. Definitions of Variables; References
Sommario/riassunto	Empirical studies that use self-reported data on remittances to measure the latter's impact on microeconomic incentives mostly ignore the potential errors associated with reporting/measurement issues. An econometric procedure to control for these errors is developed and applied to household-level data from Armenia. We find evidence of systematic under-reporting of remittances. After controlling for this, we find a strong negative impact of remittances on incentives to work.
