

1. Record Nr.	UNINA9910788618503321
Autore	Druet Olivier <1976->
Titolo	The Lin-Ni's problem for mean convex domains // Olivier Druet, Frederic Robert, Juncheng Wei
Pubbl/distr/stampa	Providence, Rhode Island : , : American Mathematical Society, , 2011 ©2011
ISBN	0-8218-9016-6
Descrizione fisica	1 online resource (105 p.)
Collana	Memoirs of the American Mathematical Society, , 0065-9266 ; ; Volume 218, Number 1027
Disciplina	515/.3533
Soggetti	Neumann problem Differential equations, Elliptic Blowing up (Algebraic geometry) Convex domains
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"July 2012, Volume 218, Number 1027 (end of volume)."
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	""Contents""; ""Abstract""; ""Introduction""; ""Chapter 1. L-bounded solutions""; ""Chapter 2. Smooth domains and extensions of solutions to elliptic equations""; ""Chapter 3. Exhaustion of the concentration points""; ""Chapter 4. A first upper-estimate""; ""Chapter 5. A sharp upper-estimate""; ""Chapter 6. Asymptotic estimates in $C^1()$ ""; ""Chapter 7. Convergence to singular harmonic functions""; ""1. Convergence at general scale""; ""2. Convergence at appropriate scale""; ""Chapter 8. Estimates of the interior blow-up rates""; ""Chapter 9. Estimates of the boundary blow-up rates"" ""Chapter 10. Proof of Theorems 1 and 2""""Appendix A. Construction and estimates on the Green's function""; ""Appendix B. Projection of the test functions""; ""Bibliography""

2. Record Nr.	UNINA9910254134903321
Autore	Cheng Alexander H.-D
Titolo	Poroelasticity / / by Alexander H.-D. Cheng
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2016
ISBN	3-319-25202-X
Edizione	[1st ed. 2016.]
Descrizione fisica	1 online resource (893 p.)
Collana	Theory and Applications of Transport in Porous Media, , 0924-6118 ; ; 27
Disciplina	620.116
Soggetti	Mechanics Mechanics, Applied Geotechnical engineering Fossil fuels Engineering geology Engineering—Geology Foundations Hydraulics Solid Mechanics Geotechnical Engineering & Applied Earth Sciences Fossil Fuels (incl. Carbon Capture) Geoengineering, Foundations, Hydraulics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Introduction -- Constitutive Equation -- Micromechanics -- Variational Energy Formulation -- Anisotropy -- Governing Equation -- Analytical Solution -- Fundamental Solution and Integral Equation -- Poroelastodynamics -- Poroviscoelasticity -- Porothermoelasticity -- Porochemoelasticity -- Appendices -- Index.
Sommario/riassunto	This book treats the mechanics of porous materials infiltrated with a fluid (poromechanics), focussing on its linear theory (poroelasticity). Porous materials from inanimate bodies such as sand, soil and rock, living bodies such as plant tissue, animal flesh, or man-made materials

can look very different due to their different origins, but as readers will see, the underlying physical principles governing their mechanical behaviors can be the same, making this work relevant not only to engineers but also to scientists across other scientific disciplines. Readers will find discussions of physical phenomena including soil consolidation, land subsidence, slope stability, borehole failure, hydraulic fracturing, water wave and seabed interaction, earthquake aftershock, fluid injection induced seismicity and heat induced pore pressure spalling as well as discussions of seismoelectric and seismoelectromagnetic effects. The work also explores the biomechanics of cartilage, bone and blood vessels. Chapters present theory using an intuitive, phenomenological approach at the bulk continuum level, and a thermodynamics-based variational energy approach at the micromechanical level. The physical mechanisms covered extend from the quasi-static theory of poroelasticity to poroelastodynamics, poroviscoelasticity, porothermoelasticity, and porochemoelasticity. Closed form analytical solutions are derived in details. This book provides an excellent introduction to linear poroelasticity and is especially relevant to those involved in civil engineering, petroleum and reservoir engineering, rock mechanics, hydrology, geophysics, and biomechanics.
