Sommario/riassunto	The IMF Research Bulletin, a quarterly publication, selectively summarizes research and analytical work done by various departments at the IMF, and also provides a listing of research documents and other research-related activities, including conferences and seminars. The Bulletin is intended to serve as a summary guide to research done at the IMF on various topics, and to provide a better perspective on the analytical underpinnings of the IMF's operational work.

Nota di contenuto	Theory on dielectric slab waveguide -- Transfer matrix method and the graded-index waveguide -- Periodic waveguide and MQW waveguide -- Characterizing the feature parameters of optical waveguide -- Surface plasmon waves -- Symmetrical metal-cladding waveguide -- Goos-Hänchen shift -- Optical devices based on the attenuated total reflection.
Sommario/riassunto	This book provides a comprehensive description of various slab waveguide structures ranged from graded-index waveguide to symmetrical metal-cladding waveguide. In this book, the transfer Matrix method is developed and applied to analyze the simplest case and the complex generalizations. A novel symmetrical metal-cladding waveguide structure is proposed and systematically investigated for several issues of interest, such as biochemical sensing, Goos-Hänchen shift and the slow light effect, etc. Besides, this book summarizes the authors' research works on waveguides over the last decade. The readers who are familiar with basic optics theory may find this book easy to read and rather inspiring.
