Sommario/riassunto	<p>This paper discusses Turkey's Request for Stand-By Arrangement (SBA) and Extension of Repurchase Expectations. Turkey's economic program has delivered impressive results. Output has grown rapidly, inflation has fallen to its lowest level in a generation, and government debt has declined markedly. However, significant vulnerabilities remain. The authorities have prepared a three-year economic program for which they are seeking the support of the IMF. Implemented successfully, the program should help Turkey converge toward the economies of the European Union and exit successfully from IMF financial support.</p>

Sommario/riassunto

Part of the successful Institute of Health Economics (IHE) book series, this handbook and ready reference adopts a unique approach in combining policy recommendations with specific treatment options for Parkinson patients. The first part of the book deals with the clinical, medical, social and economical aspects of Parkinson Disease. These ten chapters include the latest diagnosis and treatment options for patients, the economical consequences, social and ethical implications and end-of life issues. The second part of the book essentially covers a large-scale case study on Parkinson in Alber
