Titolo	Spectral asymptotics on degenerating hyperbolic 3-manifolds // Jozef Dodziuk, Jay Jorgenson
Pubbl/distr/stampa	Providence, Rhode Island : , : American Mathematical Society, , [1998] ©1998
ISBN	1-4704-0232-7
Descrizione fisica	1 online resource (90 p.)
Collana	Memoirs of the American Mathematical Society, , 0065-9266 ; ; number 643
Disciplina	510 s 516.9
Soggetti	Geometry, Hyperbolic Hyperbolic spaces Spectral theory (Mathematics) Asymptotic expansions
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"September 1998, volume 135, number 643 (third of 5 numbers)."
Nota di bibliografia	Includes bibliographical references (pages 73-75).
Nota di contenuto	""Contents""; ""Introduction""; ""A1- Review of hyperbolic geometry""; ""A2. Convergence of heat kernels""; ""A3. Infinite cylinder estimates""; ""A4. Heat kernels and regularized heat traces""; ""A5. Degenerating heat traces""; ""A6. Poisson kernel estimates""; ""A7. Analysis of trace integrals""; ""A8. Convergence of regularized heat traces""; ""A9. Long time asymptotics""; ""A10. Spectral zeta functions""; ""A11- Selberg zeta functions""; ""A12. Hurwitz- type zeta functions""; ""A13. Asymptotics of spectral measures""; ""A14. Eigenvalue counting problems"" ""A15. Convergence of spectral projections""""Bibliography""

Titolo	Wildfire Hazard and Risk Assessment
Pubbl/distr/stampa	Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022
Descrizione fisica	1 online resource (222 p.)
Soggetti	Biology, life sciences Forestry & related industries Research & information: general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Wildfire risk can be perceived as the combination of wildfire hazards (often described by likelihood and intensity) with the susceptibility of people, property, or other valued resources to that hazard. Reflecting the seriousness of wildfire risk to communities around the world, substantial resources are devoted to assessing wildfire hazards and risks. Wildfire hazard and risk assessments are conducted at a wide range of scales, from localized to nationwide, and are often intended to communicate and support decision making about risks, including the prioritization of scarce resources. Improvements in the underlying science of wildfire hazard and risk assessment and in the development, communication, and application of these assessments support effective decisions made on all aspects of societal adaptations to wildfire, including decisions about the prevention, mitigation, and suppression of wildfire risks. To support such efforts, this Special Issue of the journal Fire compiles articles on the understanding, modeling, and addressing of wildfire risks to homes, water resources, firefighters, and landscapes.
