

1. Record Nr.	UNINA9910788952303321
Autore	Antyufeev V. S.
Titolo	Monte Carlo method for solving inverse problems of radiation transfer / / V.S. Antyufeev
Pubbl/distr/stampa	Utrecht, the Netherlands : , : VSP, , 2000
ISBN	3-11-092030-1
Edizione	[Reprint 2014]
Descrizione fisica	1 online resource (201 pages) : illustrations
Collana	Inverse and ill-posed problems series
Disciplina	536.3
Soggetti	Monte Carlo method Inverse problems (Differential equations) Radiative transfer
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Frontmatter -- Contents -- Preface -- Chapter 1. Monte Carlo modifications for solving problems of radiation transfer -- Chapter 2. Generalized transport equation with highly peaked phase function -- Chapter 3. Calculation of the correlation characteristics of radiation field in the stochastic medium by the Monte Carlo method -- Chapter 4. Identification of the phase function -- Chapter 5. Regularization in solving inverse problems of atmosphere optics -- Chapter 6. Direct and inverse problems of radiation transfer in a plant canopy -- Chapter 7. X-ray tomography in scattering media -- Appendix . Integral equation of the second kind with stochastic kernel -- Appendix . Computation of radiation field in optically thick medium by the Monte Carlo method -- Appendix C. A new method for identification of the phase function -- Bibliography
