

1. Record Nr.	UNINA9910789064103321
Autore	Shepherd W (William), <1928->
Titolo	Electricity generation using wind power [[electronic resource] /] / William Shepherd, Li Zhang
Pubbl/distr/stampa	Hackensack, N.J., : World Scientific, 2010
ISBN	1-283-43338-9 9786613433381 1-61344-613-6 981-4304-14-X
Descrizione fisica	1 online resource (257 p.)
Altri autori (Persone)	ZhangLi
Disciplina	333.92
Soggetti	Wind power Electric power production
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Foreword and Acknowledgement; Contents; CHAPTER 1 The Development of Wind Converters; 1.1 Nature and Origin of the Wind; 1.2 Development of Wind Converters; References; CHAPTER 2 Theory of Wind Converters; 2.1 Power and Energy Basis of Wind Converters; 2.1.1 Origin and properties of the wind; 2.1.2 Power and energy; 2.2 Theoretical Power Available in the Wind; 2.3 Theoretical Maximum Power Extractable from the Wind; 2.4 Practical Power Extractable from the Wind; 2.4.1 Power coefficient; 2.4.2 Torque versus rotational speed; 2.4.3 Shaft power versus rotational speed; 2.4.4 Tip-speed ratio (TSR)2.5 Mechanical Features of Wind Machines; 2.5.1 Axial thrust (Pressure); 2.5.2 The ""Yaw"" effect; 2.5.3 Gyroscopic forces and vibrations; 2.5.4 Centrifugal forces; 2.5.5 Solidity factor; 2.5.6 Two rotor blades or three rotor blades?; 2.5.7 Shaft torque and power; 2.6 Fixed Rotational Speed or Variable Rotational Speed?; 2.6.1 Constant speed operation; 2.6.2 Variable speed operation; 2.7 Efficiency Considerations of Wind-Powered Electricity Generation; 2.8 Worked Numerical Examples on Wind-Turbine Operation; 2.9 Problems and Review Questions; References CHAPTER 3 Past and Present Wind-Energy Turbines3.1 Nineteenth-

Century Windmills; 3.2 Early Twentieth-Century Wind-Energy Turbines; 3.3 Later Twentieth-Century Wind-Energy Turbines; 3.4 Modern Large Wind Power Installations; 3.5 Worked Numerical Example; 3.6 Vertical Axis Wind Machines; 3.6.1 The Savonius design; 3.6.2 The Darrieus design; 3.6.3 Other forms of vertical axis machine; References; CHAPTER 4 The Location and Siting of Wind Turbines; 4.1 The Availability of Wind Supply; 4.1.1 Global survey; 4.1.2 Energy content of the wind; 4.1.3 Wind-energy supply in Europe; 4.1.4 Wind-energy supply in the USA; 4.2 Statistical Representation of Wind Speed; 4.3 Choice of Wind Turbine Sites; 4.3.1 Identification of suitable areas; 4.3.2 Selection of possible sites within the chosen area; 4.4 Effects of the Site Terrain; 4.5 Spacing Effects of Wind Farm Arrays; 4.6 Problems and Review Questions; References; CHAPTER 5 Power Flow in Electrical Transmission and Distribution Systems; 5.1 Basic Forms of Power Transmission Networks; 5.2 Current and Voltage Relationships; 5.3 Power Relationships in Sinusoidal Circuits; 5.3.1 Instantaneous power; 5.3.2 Average power and apparent power; 5.3.3 Power factor; 5.3.4 Reactive power; 5.4 Complex Power; 5.5 Real Power Flow and Reactive Power Flow in Electrical Power Systems; 5.5.1 General summary; 5.5.2 Summary from the perspective of the consumer; References; CHAPTER 6 Electrical Generator Machines in Wind-Energy Systems; 6.1 DC Generators; 6.2 AC Generators; 6.3 Synchronous Machine Generators; 6.4 Three-Phase Induction Machine; 6.4.1 Three-phase induction motor; 6.4.2 Three-phase induction generator; 6.4.3 Different generation systems; 6.5 Analysis of Induction Generator in Terms of Complex Vector Representation

Sommario/riassunto

The use of the wind as an energy source is increasing and growing worldwide. Wind energy is an important non-fossil option to supplement fossil (coal, natural gas and oil) and nuclear fuels for the generation of electricity. Many parts of the world, particularly the coastlines of Western Europe, North Africa, North and South America, India, Eastern Russia, China, the Philippines, Australia and New Zealand, experience a high annual incidence of wind energy. The United Kingdom of Great Britain and Northern Ireland, together with the Republic of Ireland form a particularly windy location, being f
