Sommario/riassunto

The pronominal clitic system in Kashmiri takes the form of set of verbal suffixes conditioned by the case of the coreferent DP. This system interacts in unexpected ways with differential argument encoding (DAE) in Kashmiri, in which the case-marking of objects in non-perfective aspects is dependent on a person hierarchy. I will follow in spirit Aissen's (2003) approach to DAE as adapted to Kashmiri in Sharma (2001), however I will argue that the particulars of the Kashmiri clitic system force us to adopt an account couched not in the syntax, but in the post-syntactic component of the grammar.
