Sommario/riassunto	In the interwar period, western health experts considered ultraviolet light a powerful means for stimulating the population. In Germany, the electrical industry started to sell sunlamps for daily use, while hygienists and the spokesmen of the health reform movement celebrated the health effects of “light showers” in the popular press. Based on a careful reading of a wide variety of scientific and popular texts, the book maps the functions of sunlight in western medicine and culture. It studies the history of light and heliotherapy in medicine and investigates the transition of medical practices towards a marketed consumer product. The book argues that the electrification of light therapy shaped a new rationale for the application of light on the human body in medicine and beyond at the start of the 20th century.

Sommario/riassunto

The 17 th edition of International Conference on Nonferrous Metals (ICNFM-2013), was organized by Corporate Monitor in association with Alcircle and MECON at Ranchi, India during 5-6 th July 2013, with an aim to purposefully discuss the above issues and projecting the latest developments in the field on nonferrous mineral exploration, metal extraction and processing. The papers received from national and international organizations covered topics from geological understanding, insights on mine reserves, metal extraction, metal purification, productivity enhancement, as well as long term market
