

1. Record Nr.	UNINA9910789225503321
Autore	Potter Norman N
Titolo	Food Science [[electronic resource]] : Fifth Edition / / by Norman N. Potter, Joseph H. Hotchkiss
Pubbl/distr/stampa	New York, NY : , : Springer US : , : Imprint : Springer, , 1995
ISBN	1-4615-4985-X
Edizione	[5th ed. 1995.]
Descrizione fisica	1 online resource (XV, 608 p.)
Collana	Food Science Text Series, , 1572-0330
Disciplina	641.3 664
Soggetti	Food—Biotechnology Chemistry Food Science Chemistry/Food Science, general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1 Introduction: Food Science as a Discipline -- 2 Characteristics of the Food Industry -- 3 Constituents of Foods: Properties and Significance -- 4 Nutritive Aspects of Food Constituents -- 5 Unit Operations in Food Processing -- 6 Quality Factors in Foods -- 7 Food Deterioration and its Control -- 8 Heat Preservation and Processing -- 9 Cold Preservation and Processing -- 10 Food Dehydration and Concentration -- 11 Irradiation, Microwave, and Ohmic Processing of Foods -- 12 Fermentation and Other Uses of Microorganisms -- 13 Milk and Milk Products -- 14 Meat, Poultry, and Eggs -- 15 Seafoods -- 16 Fats, Oils, and Related Products -- 17 Cereal, Grains, Legumes, and Oilseeds -- 18 Vegetables and Fruits -- 19 Beverages -- 20 Confectionery and Chocolate Products -- 21 Principles of Food Packaging -- 22 Food Processing and the Environment -- 23 Food Safety, Risks, and Hazards -- 24 Governmental Regulation of Food and Nutrition Labeling -- 25 Hunger, Technology, and World Food Needs.
Sommario/riassunto	Now in its fifth edition, Food Science remains the most popular and reliable text for introductory courses in food science and technology. This new edition retains the basic format and pedagogical features of previous editions and provides an up-to-date foundation upon which

more advanced and specialized knowledge can be built. This essential volume introduces and surveys the broad and complex interrelationships among food ingredients, processing, packaging, distribution and storage, and explores how these factors influence food quality and safety. Reflecting recent advances and emerging technologies in the area, this new edition includes updated commodity and ingredient chapters to emphasize the growing importance of analogs, macro-substitutions, fat fiber and sugar substitutes and replacement products, especially as they affect new product development and increasing concerns for a healthier diet. Revised processing chapters include changing attitudes toward food irradiation, greater use of microwave cooking and microwaveable products, controlled and modified atmosphere packaging and expanding technologies such as extrusion cooking, ohmic heating and supercritical fluid extraction, new information that addresses concerns about the responsible management of food technology, considering environmental, social and economic consequences, as well as the increasing globalization of the food industry. Discussions of food safety and consumer protection including newer phytochemical pathogens; HACCP techniques for product safety and quality; new information on food additives; pesticides and hormones; and the latest information on nutrition labeling and food regulation. An outstanding text for students with little or no previous instruction in food science and technology, Food Science is also a valuable reference for professionals in food processing, as well as for those working in fields that service, regulate or otherwise interface with the food industry.
