Sommario/riassunto

Advances in Biotechnology, Volume III: Fermentation Products is the third of a series of three volumes and is based on the proceedings of the Sixth International Fermentation Symposium (IFS-6) held in London, Ontario, Canada, 20-25 July 1980. This volume contains 87 papers organized into nine sections. The papers under Section I deal with developments in the field of secondary metabolism (functions of secondary metabolites in the producing organisms; roles of plasmids in the biosynthesis of secondary metabolites; and protoplast fusion in industrial microorganisms). Sections II to VII examine t
