

1. Record Nr.	UNINA9910789622603321
Titolo	Molecular aspects of neurodegeneration and neuroprotection // edited by Akhlaq A. Farooqui & Tahira Farooqui
Pubbl/distr/stampa	[S.l.], : Bentham Science Publishers, [2011]
ISBN	1-60805-092-0
Descrizione fisica	1 online resource (vi, 146 pages) : illustrations
Disciplina	600
Soggetti	Brain - Degeneration Neuroprotective agents
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	01 Title Page.pdf; 02 Cover Page; 04 CONTENTS; 05 Foreword; 06 PREFACE; 07 CONTRIBUTORS; 09 chapter 1; 10 chapter 2; 11 chapter 3; 12 chapter 4; 13 chapter 5; 14 chapter 6; 15 chapter 7; 16 chapter 8; 17 chapter 9; 18 chapter 10; 19 chapter 11; 20 index
Sommario/riassunto	Neurodegenerative diseases are a complex heterogeneous group of diseases associated with site-specific premature and slow death of certain neuronal populations in brain and spinal cord tissues. For example, in Alzheimer disease, neuronal degeneration occurs in the nucleus basalis, whereas in Parkinson disease, neurons in the substantia nigra die. The most severely affected neurons in Huntington disease are striatal medium spiny neurons. The neuronal populations that are lost in neurodegenerative diseases modulate functions such as controlling movements, processing sensory information, memory,
