Sommario/riassunto	The number of people suffering from different eating disorders has grown dramatically within the last twenty years. These two volumes examine feeding difficulties and eating disorders in children and adolescents, from babies to 19-year-olds. The volumes consist of clinical cases that describe the process of psychoanalytic

psychotherapy used to treat the patients. The contributors look at the underlying causes for the disorders, such as bulimia and anorexia, lead to a normal life with the help of psychoanalytic psychotherapy. In addition, this collection takes into account the profound effects eating disorders have, not only on the patients, but on their immediate family and friends as well. 'Many cases describe the anxieties and strategies of defence used against feelings of dependence and the risk of accepting from another. This is a core theme in both volumes and is the principle idea behind the paradoxical title, The Generosity of Acceptance.
