Sommario/riassunto

In recent decades, the prevalence of heart failure has steadily increased and can be considered a contemporary cardiovascular epidemic. Therefore, treatment of heart failure is a primary focus of cardiovascular disease management strategies. Cardiac resynchronization therapy: an established pacing therapy for heart failure and mechanical dyssynchrony provides basic knowledge about congestive heart failure and also covers the evolution of cardiac resynchronization therapy. State-of-the-art information and future directions of this therapeutic tool are explained. As cardiac resynchronization the
