Sommario/riassunto	This core, introductory textbook for undergraduate and graduate level courses is the first volume to combine the knowledge and skills of counseling psychology with current theory and research in grief and bereavement. It is grounded in the belief that grief counseling is distinct from other therapeutic issues because grief is an adaptive response rather than a form of pathology. The book describes the unique aspects of grief as a normal response to loss and views the goal of counseling bereaved individuals as one of facilitating the unfolding

of the healthy and adaptive aspects of the process
