

1. Record Nr.	UNINA9910790168203321
Autore	Pope James A (James Arthur), <1950->
Titolo	Supply-chain survival in the age of globalization [[electronic resource]] / by James A. Pope
Pubbl/distr/stampa	[New York, N.Y.] (222 East 46th Street, New York, NY 10017), : Business Expert Press, c2012
ISBN	1-78268-103-5 1-283-89266-9 1-60649-164-4
Edizione	[1st ed.]
Descrizione fisica	1 online resource (130 p.)
Collana	Supply and operations management collection, , 2156-8200
Disciplina	658.7
Soggetti	Business logistics International business enterprises
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 89-101) and index.
Nota di contenuto	About the author -- Acknowledgments -- Foreword -- 1. Background -- 2. Post-World War II developments -- 3. The supply-chain management concept -- 4. The impact of globalization -- 5. Globalization issues -- 6. Supply-chain security -- 7. Day-to-day issues -- 8. Doing it right: a mini case study -- Notes -- References -- Glossary -- Disclosures -- Index.
Sommario/riassunto	When supply-chain management moves into the global arena the problems are profoundly different from those in domestic supply chains. This book will examine the history and background of global supply chains, some of the unique problems faced when managing a global supply chain, and some ways of dealing with these problems. Each chapter ends with suggested action items for the global supply-chain manager.

Nota di bibliografia

Includes bibliographical references at the end of each chapters and index.

Nota di contenuto

An Introduction to Dependent Type Theory -- Monads and Effects -- Abstract Machines, Control, and Sequents -- Normalization and Partial Evaluation -- Computing with Real Numbers -- The Join Calculus: A Language for Distributed Mobile Programming -- An Introduction to Functional Nets -- Operational Semantics and Program Equivalence -- Using, Understanding, and Unraveling the OCaml Language From Practice to Theory and Vice Versa.

Sommario/riassunto

This book is based on material presented at the international summer school on Applied Semantics that took place in Caminha, Portugal, in September 2000. We aim to present some recent developments in programming language research, both in semantic theory and in implementation, in a series of graduate-level lectures. The school was sponsored by the ESPRIT Working Group 26142 on Applied Semantics (APPSEM), which operated between April 1998 and March 2002. The purpose of this working group was to bring together leading researchers, both in semantic theory and in implementation, with the specific aim of improving the communication between theoreticians and practitioners.

The activities of APPSEM were restructured into nine interdisciplinary themes:

A: Semantics for object-oriented programming B: Program structuring
C: Integration of functional languages and proof assistants D: Verification methods
E: Automatic program transformation F: Games, sequentiality, and abstract machines
G: Types and type inference in programming H: Semantics-based optimization
I: Domain theory and real number computation

These themes were identified as promising for a fruitful interaction between semantic theory and practice, and were chosen to contribute to the following general topics:

- description of existing programming language features;
- design of new programming language features;
- implementation and analysis of programming languages;
- transformation and generation of programs;
- verification of programs.

The chapters in this volume give examples of recent developments covering a broad range of topics of interest to APPSEM.
