Sommario/riassunto	<P>Generic institutionalism offers a new perspective on institutional economic change within an evolutionary framework. The institutional landscape shapes the social fabric and economic organization in manifold ways. The book elaborates on the ubiquity of such

institutional forms with regards to their emergence, durability and exit in social agency-structure relations. Thereby institutions are considered as social learning environments changing the knowledge base of the economy along generic rule-sets in non-nomological ways from within.
