Sommario/riassunto With over 40,000 described species, spiders have adapted to nearly every terrestrial environment across the globe. Over half of the world's spider families live within the three contiguous Pacific Coast states-not surprising considering the wide variety of habitats, from mountain meadows and desert dunes to redwood forests and massive urban centers. This beautifully illustrated, accessible guide covers all of the families and many of the genera found along the Pacific Coast, including introduced species and common garden spiders. The author provides readers with tools for identifying many of the region's spiders to family, and when possible, genus and species. He discusses taxonomy, distribution, and natural history as well as what is known of the habits of the spiders, the characters of families, and references to taxonomic revisions of the pertinent genera. Full-color plates for each family bring to life the incredible diversity of this ancient arachnid order.

Collana Slavistische Beitrage ; 224
Soggetti Literature & literary studies
Lingua di pubblicazione Tedesco
Formato Materiale a stampa
Livello bibliografico Monografia
Note generali Peter Lang GmbH, Internationaler Verlag der Wissenschaften
Nota di contenuto Introduction - The Slavic and Greek texts of the Akathistos - The Greek Akathistos - The evidence for metrical adaption in early Slavic translated hymns - Textual variants and poetic structure - Transmission of poetic devices in the translation - Principles of early Slavic translation, the relationship of music and text, translatability from Greek to Slavic, and the liturgical function of the Byzantine hymns
Sommario/riassunto This work offers a detailed analysis of the Slavic translation of a sixth-

century Greek liturgical poem that is representative of the poetic genius of the best of the Byzantine melodies. The immediate goal has been to discover to what degree the poetic elements of the original text were reproduced in the translation. The analysis illuminates the question of the quality of the Slavic translations of Byzantine liturgical hymns.
