1. Introduction

Sommario/riassunto

The theory of language change has in recent years increased its explanatory repertoire by pointing out the role of language contact in determining which paths of development are entered and followed under specified conditions. In particular, language shifting - as unmonitored second language learning - is recognized as a powerful mechanism for introducing new verbal categories into language systems as well as leading to the loss of verbal categories from language systems. In this paper I will relate several of the most important structural changes and categorial differences in the verb systems
