Eating Stardust: Population, Food, and Agriculture on Planet Earth -- 2. Agricultural Revolutions -- 3. Thinking Critically about Sustainable Agrifood Systems -- 4. Sustainable Agrifood Systems: Three Emphases -- 5. Managing Evolution: Plant Breeding and Biotechnology -- 6. Managing Agricultural Ecosystems: The Critical Role of Diversity -- 7. Managing People: The Common Property Option -- 8. The Big Solutions: Climate Change, Resource Cycles, and Diet -- 9. The Big Solutions: Localizing Agrifood Systems -- Appendix 1. Acronyms, Abbreviations, and Symbols -- Appendix 2. Metric Units and Metric-English Unit Conversions -- Notes -- References -- Index This book is an interdisciplinary primer on critical thinking and Sommario/riassunto effective action for the future of our global agrifood system, based on an understanding of the system's biological and sociocultural roots.

Key components of the book are a thorough analysis of the

assumptions underlying different perspectives on problems related to

food and agriculture around the world and a discussion of alternative solutions. David Cleveland argues that combining selected aspects of small-scale traditional agriculture with modern scientific agriculture can help balance our biological need for food with its environmental impact-and continue to fulfill cultural, social, and psychological needs related to food. Balancing on a Planet is based on Cleveland's research and engaging teaching about food and agriculture for more than three decades. It is a tool to help students, faculty, researchers, and interested readers understand debates about the current crisis and alternatives for the future.
