Sommario/riassunto	<p>"Focusing on the Avestan and Pahlavi versions of the Sih-rozag, a text worshipping Zoroastrian divine entities, this book explores the spiritual principles and physical realities associated with them. Introducing the book is an overview of the structural, linguistic and historico-religious elements of the Avestan Sih-rozag. This overview, as well as reconstructing its approximate chronology, helps in understanding the original ritual function of the text and its relationship to the other Avestan texts. The book then studies the translation of the text in the Middle Persian language, Pahlavi, which was produced several centuries after its initial composition, when Avestan was no longer understood by the majority of the Zoroastrian community. Addressing the lacuna in literature examining an erstwhile neglected Zoroastrian text, The Sih-Rozag in Zoroastrianism includes a detailed commentary and an English translation of both the Avestan and Pahlavi version of the Sih-rozag and will be of interest to researchers and scholars of Iranian Studies, Religion, and History"--</p> <p>"Focusing on the Avestan and Pahlavi versions of the Sih-rozag."</p>

Sommario/riassunto	This book focuses on the most recent, relevant, comprehensive and

significant advances in cancer and chemo prevention. It broadly discusses cancer, its hallmarks and classification, molecular mechanisms of outbreak, contributing factors, role of oxidative stress, inflammatory mediators and evading apoptosis, which leads to the progression of disease. Though modern medicine has left us with no option to treat this deadly disease due to drawbacks associated with conventional treatment – like its non-targeted nature, drug resistance, varied organ toxicities and unaffordability – chemoprevention offers a viable therapeutic window. Given chemoprevention's importance in the present scenario, the book highlights various chemo preventive strategies currently used in the management of cancer; a selection of novel chemo preventive agents used at clinics and in the pre-clinical stage; hurdles to effective chemoprevention; future prospects and the road ahead. It offers a valuable guide for all graduate students and researchers seeking information on cancer and chemoprevention in general, irrespective of the specific type/pathways involved in its onset.
