Islamic Education in Britain: Approaches to Religious Knowledge in a Pluralistic Society / Mandaville, Peter -- Chapter 11. Epilogue: Competing Conceptions of Religious Education / Zaman, Muhammad Qasim -- Index

Sommario/riassunto

Since the Taliban seized Kabul in 1996, the public has grappled with the relationship between Islamic education and radical Islam. Media reports tend to paint madrasas--religious schools dedicated to Islamic learning--as medieval institutions opposed to all that is Western and as breeding grounds for terrorists. Others have claimed that without reforms, Islam and the West are doomed to a clash of civilizations. Robert Hefner and Muhammad Qasim Zaman bring together eleven internationally renowned scholars to examine the varieties of modern Muslim education and their implications for national and global politics. The contributors provide new insights into Muslim culture and politics in countries as different as Morocco, Egypt, Pakistan, India, Indonesia, Iran, and Saudi Arabia. They demonstrate that Islamic education is neither timelessly traditional nor medieval, but rather complex, evolving, and diverse in its institutions and practices. They reveal that a struggle for hearts and minds in Muslim lands started long before the Western media discovered madrasas, and that Islamic schools remain on its front line. Schooling Islam is the most comprehensive work available in any language on madrasas and Islamic education.

Descrizione fisica	1 online resource (236 p.)
Soggetti	Biology, life sciences
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Within the idea and objective of bringing together original studies dealing with the continuum aspects of meat, i.e., from farm to fork, this book grouped papers on the study of the nutritional, sensory, and technological aspects of carcass, muscle, meat, and meat-product qualities. This book highlights a great part of the research activities in the field of meat science. A total of 14 original studies and one comprehensive review were edited within five main topics: (i) production systems and rearing practices, (ii) prediction of meat quality, (iii) statistical approaches for meat quality prediction/management, (iv) muscle biochemistry and proteomics techniques, and (v) consumer acceptability, development, and characterization of meat products.</p>
