1. Record Nr. UNISA996483071703316

Autore	Khantuleva Tatiana Aleksandrovna
Titolo	Mathematical modeling of shock-wave processes in condensed matter : from statistical thermodynamics to control theory / / Tatiana Aleksandrovna Khantuleva
Pubbl/distr/stampa	Singapore : , : Springer, , [2022] ©2022
ISBN	9789811924040 9789811924033
Descrizione fisica	1 online resource (347 pages)
Collana	Shock wave and high pressure phenomena
Disciplina	530.41
Soggetti	Condensed matter
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Intro -- Preface -- Contents -- 1 Models of Continuum Mechanics and Their Deficiencies -- 1.1 Description of Macroscopic Systems -- Macroscopic Variables -- 1.2 Macroscopic Transport Equations -- 1.2.1 Equation of Mass Transport -- 1.2.2 Equation of Momentum Transport -- 1.2.3 Equation of Energy Transport -- 1.3 Validity of Continuum Mechanics -- 1.4 The Problem of Closure of the Transport Equations -- 1.5 Medium Models and Transient Processes -- 1.6 Averaging in Continuum Mechanics -- 1.7 Deficiencies of the Continuum Mechanics Concept -- 1.8 The Problem of a Uniform Description of the Media Motions -- 1.9 Short Review of Approaches to Extension of Continuum Mechanics -- References -- 2 Specific Features of Processes Far from Equilibrium -- 2.1 Experimental Difficulties in Studying Non-Equilibrium Processes -- 2.2 Anomalous Medium Response to Strong Impact -- 2.3 The Internal Structure Effects -- 2.4 Fluctuations, Pulsations, and Instabilities -- 2.5 Multi-Scale Energy Exchange Between Various Degrees of Freedom -- 2.6 Multi-Stage Relaxation Processes -- 2.7 Finite Speed of Disturbance Propagation and the Delay Effects -- 2.8 Influence of the Loading Duration and Inertial Effects -- 2.9 Dynamic Self-Organization of New Internal Structure in Open Systems -- 2.10 Predictive Ability of Modeling Non-Equilibrium Processes -- References -- 3 Macroscopic Description

in Terms of Non-Equilibrium Statistical Mechanics -- 3.1 Fundamentals of Statistical Mechanics -- 3.2 Bogolyubov's Hypothesis of Attenuation of Spatiotemporal Correlations -- 3.3 Rigorous Statistical Approaches to Non-Equilibrium Processes -- 3.4 Description of Macroscopic Systems from the First Principles. Local-Equilibrium Distribution Function -- 3.5 Description of Macroscopic Systems from the First Principles. Non-equilibrium Distribution Function.
3.6 Non-Equilibrium Statistical Operator by Zubarev -- 3.7 The Nonlocal Thermodynamic Relationships with Memory Between the Conjugate Macroscopic Fluxes and Gradients -- 3.8 Two Types of the Spatiotemporal Nonlocal Effects -- 3.9 Main Problem of Non-Equilibrium Statistical Mechanics -- 3.10 The Disadvantages and New Opportunities to Close Transport Equations for High-Rate Processes -- References -- 4 Thermodynamic Concepts Out of Equilibrium -- 4.1 Basic Concepts and Principles of Thermodynamics -- 4.2 Entropy Production in Transport Processes -- 4.3 Linear Thermodynamics of Irreversible Processes -- 4.4 Revision of the Generally Accepted Thermodynamic Concepts Out of Equilibrium -- 4.5 Thermodynamic Entropy, Information Entropy, and Information -- 4.6 Local Entropy Production Near and Far from Equilibrium -- 4.7 Total Entropy Generation and the Second Law of Thermodynamics -- 4.8 Maximum Entropy Principle by Jaynes -- 4.9 Influence of the Constraints Imposed on the System -- 4.10 Thermodynamic Temporal Evolution Out of Equilibrium -- 4.11 Self-organization of New Structures in Thermodynamics -- References -- 5 New Approach to Modeling Non-equilibrium Processes -- 5.1 Generalized Constitutive Relationships Based on Non-Equilibrium Statistical Mechanics -- 5.2 Modeling Spatiotemporal Correlation Functions -- 5.3 Temporal Stages of the Correlation Attenuation -- 5.4 Deficiencies of the Generally Accepted Models for the Media with Complicated Properties -- 5.5 Requirements to New Approach to Modeling Shock-Induced Processes -- 5.6 Foundations of New Approach to Modeling Transport Processes Far from Equilibrium -- 5.7 New Interdisciplinary Approach to Modeling Highly Non-Equilibrium Processes -- 5.8 Interrelationship Between Spatiotemporal Correlations and Dynamic Structure of the System -- 5.9 Modeling Correlation Functions in Boundary-Value Problems.
5.10 Boundary Conditions for Nonlocal Equations -- 5.11 Discrete-Size Spectrum of the Dynamic Structure of a Bounded System -- 5.12 The Mathematical Basis for the Self-Consistent Problem Formulation -- 5.13 Distinctive Features of New Approach from Semi-Empirical Models -- References -- 6 Description of the Structure Evolution Using Methods of Control Theory of Adaptive Systems -- 6.1 Methods of Control Theory in Physics. Cybernetical Physics -- 6.2 Speed Gradient Principle by Fradkov for Non-Stationary Complex Systems -- 6.3 Description of the System Temporal Evolution at Macroscopic Level -- 6.4 Temporal Evolution of Statistical Distribution Functions -- 6.5 The System Temporal Evolution Out of Local Equilibrium on the Mesoscale -- 6.6 Internal Control on the Mesoscale Based on Speed Gradient Principle -- 6.7 Entropy Production in a Stationary State Out of Equilibrium -- 6.8 Paths of Structural Evolution and Reduction of Irreversible Losses Due to Self-Organization -- 6.9 A New Look at the Problem of Stability of Non-Equilibrium Systems -- 6.10 Influence of Feedbacks on the Paths of the System Evolution and Prediction of the Final States -- References -- 7 The Shock-Induced Planar Wave Propagation in Condensed Matter -- 7.1 Thermodynamic Properties of Solids -- 7.2 Wave Processes in Crystal Lattice -- 7.3 Elastic Properties of Solids -- 7.4 Plastic Deformation. Deficiencies of Continuum Mechanics -- 7.5 Shock Wave as a Transient

Highly Non-equilibrium Process -- 7.6 The Integral Model for the Stress Tensor Without Separation into Elastic and Plastic Parts -- 7.7 Formulation of the Problem of the Shock-Induced Wave Propagation in Condensed Matter -- 7.8 Self-similar Quasi-Stationary Solution to the Problem -- 7.9 The Relaxation Model of the Shock-Induced Waveforms During Propagation.
7.10 Decryption of the Information Recorded in the Experimentally Observed Waveforms -- 7.11 Comparison of the Model Waveforms with Experimental Data -- References -- 8 Evolution of Waveforms During Propagation in Solids -- 8.1 Waveforms Evolution Within the Integral Model -- 8.2 Speed-Gradient Principle for the Waveforms Evolution -- 8.3 The Waveform Evolution During Quasi-Stationary Wave Propagation -- 8.4 Paths of the Waveform Evolution and Experimental Results -- 8.5 Modeling Finite-Duration Waveforms -- 8.6 Shock-Induced Waveform as a Result of Non-monotone Relaxation -- 8.7 Entropy Production in Finite-Duration Waveforms -- 8.8 Evolution of the Waveforms During Their Propagation -- References -- 9 Abnormal Loss or Growth of the Wave Amplitude -- 9.1 Mass Velocity Dispersion and Interference of Shock Waves on the Mesoscale -- 9.2 The Shock-Induced Waveform as a Wave Packet -- 9.3 Behavior of the Mass Velocity Dispersion and the Waveform Amplitude Loss -- 9.4 Dependence of the Waveform Amplitude Loss on the Impact Velocity -- 9.5 Multi-scale Momentum and Energy Exchange in Wave Processes -- 9.6 The Shock-Induced Structure Instability -- 9.7 Self-organization of Turbulent Structures in the Entropy Well -- 9.8 Quantum Effects on the Mesoscale -- References -- 10 The Stress-Strain Relationships for the Continuous Stationary Loading -- 10.1 Stress-Strain Relationships for Continuous Quasi-Static Loading -- 10.2 The Stress-Strain Relationship for Continuous Planar Loading with Accounting Only Shear Relaxation -- 10.3 The Stress-strain Relationship for Continuous Plane High-Rate Loading -- 10.4 Reversible and Irreversible Loading-Unloading Processes -- 10.5 Entropy Production Surfaces for Various Duration Loading and Possible Evolutionary Paths -- 10.6 Probable Evolutionary Paths and Final States.
10.7 Fundamental Difference Between Shock and Quasi-Static Loading -- References.

Pubbl/distr/stampa	New York : , : Oxford University Press, , 2014 ©2014
ISBN	0-19-933545-1 0-19-933544-3
Descrizione fisica	1 online resource (296 p.)
Disciplina	306.84/8
Soggetti	Same-sex marriage - United States - To 1865
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	Cover; Charity and Sylvia: A Same-Sex Marriage in Early America; Copyright; Contents; Preface; 1. A Child of Melancholy: 1777; 2. Infantile Days: 1784; 3. O the Example!: 1787; 4. Mistress of a School: 1797; 5. So Many Friends: 1799; 6. Discontent and Indifferent: 1800; 7. Never to Marry: 1800; 8. Charity and Mercy: 1805; 9. Charity and Lydia: 1806; 10. Charity and Sylviafebruary: 1807; 11. The Tie that Bindsjuly: 1807; 12. Their Own Dwelling: 1809; 13. Wild Affections: 1811; 14. Miss Bryant Was the Man: 1820; 15. Dear Aunts: 1823; 16. Stand Fast in One Spirit: 1828 17. Diligent in Business: 183518. The Cure of Her I Love: 1839; 19. Sylvia Drake | W: 1851; Afterword; Abbreviations; Notes; Preface; Chapter 1; Chapter 2; Chapter 3; Chapter 4; Chapter 5; Chapter 6; Chapter 7; Chapter 8; Chapter 9; Chapter 10; Chapter 11; Chapter 12; Chapter 13; Chapter 14; Chapter 15; Chapter 16; Chapter 17; Chapter 18; Chapter 19; Afterword; Acknowledgments; Index
Sommario/riassunto	Charity and Sylvia is the intimate history of the extraordinary marriage of two ordinary early American women. Their story, drawn from the women's personal writings and other original documents, reveals that same-sex marriage is not as new as we think.
