| Sommario/riassunto | In The Existential Philosophy of Etty Hillesum Meins G.S. Coetsier breaks new ground by demonstrating the Jewish existential nature of Etty Hillesum's spiritual and cultural life in light of the writings of Martin Buber, Emmanuel Levinas and Dietrich Bonhoeffer. Hillesum's diaries and letters, written between 1941 and 1943, illustrate her struggle to come to terms with her personal life in the context of the Second World War and the Shoah. By finding God under the rubble of the horrors, she rediscovers the divine presence between humankind, |

while taking up responsibility for the Other as a way to embrace justice and compassion. In a fascinating, accessible and thorough study, Coetsier dispels much of the confusion that assails readers when they are exposed to the bewildering range of Christian and Jewish influences and other cultural interpretations of her writings. The result is a convincing and profound picture of Etty Hillesum's path to spiritual freedom.

| Nota di contenuto | Introduction -- Anatomical descriptions of horsetails, ferns -- Anatomical descriptions of Dicotyledons -- Anatomical descriptions of Monocotyledons -- Synthesis of anatomical, ecological and phylogenetical data -- Material and methods. |
| Sommario/riassunto | This aesthetically unique book combines ecological, morphological and anatomical, as well as phylogenetic studies on plant material in a largely unexplored dry mountain region above the timberline. It offers the first comparative analysis of hundreds of plants - annuals, perennial herbs and dwarf shrubs - in an area of 87,000 km ² at altitudes from 2600 to 6150 m above sea level in the Western Himalaya. Characteristic landscape pictures of all major vegetation types and maps show at which locations and altitudes the individual species of vascular plants are distributed, while macroscopic plant |

pictures and plant age are related to high-quality micro-sections and micro-photographs. The anatomical features of 345 dicotyledons were characterized using the published coding systems and those of 155 monocotyledones were characterized on the basis of a newly developed key. The number of annual rings and anatomical features of the xylem and phloem of dicots are compared and related to different ecological conditions within this extremely dry and cold environment. The ecological and anatomical characterization is used to create a phylogenetic tree based on nucleotide sequences, and indicates which features are genetically stable and which ones are modified by environmental factors. The book appeals to scientists in the fields of plant taxonomy, morphology, anatomy and ecology. .
