Gold -- Body on &lt;body&gt; : coding subjectivity / Jennifer L. Bay -- &lt;?php&gt; : "invisible" code and the mystique of web writing / Helen J. Burgess -- From cyberspaces to cyberplaces : &lt;img&gt;, narrative, and the psychology of place / Rudy McDaniel and Sae Lynne Schatz -- &lt;table&gt;ing the

grid / Bradley Dilger -- Afterword: &lt;meta&gt; : casuistic code / Cynthia Haynes.

Sommario/riassunto

As it becomes impossible to imagine a world without a World Wide Web, information organization, delivery, and production have converged on the simple principle of marking up information for given audiences. From A to investigates the relationship between media and culture by articulating questions regarding the role of markup. How do the codes of HTML, CSS, PHP, and other markup languages affect the Web's everyday uses? How do these languages shape the Web's communicative functions? This novel inquiry positions markup as the basis of our cultural, rhetorical, and communicative understanding of

## Sommario/riassunto

Environmental migration is not new. Nevertheless, the events and processes accompanying global climate change threaten to increase human movement both within states and across international borders. The Inter-governmental Panel on Climate Change has predicted an increased frequency and severity of climate events such as storms, cyclones and hurricanes, as well as longer-term sea level rise and desertification, which will impact upon people's ability to survive in certain parts of the world. This book brings together a variety of disciplinary perspectives on the phenomenon of climate-induced displacement. With chapters by leading scholars in their field, it collects in one place a rigorous, holistic analysis of the phenomenon, which can better inform academic understanding and policy development alike. Governments have not been prepared to take a leading role in developing responses to the issue, in large part due to the absence of strong theoretical frameworks from which sound policy can be constructed. The specialist expertise of the authors in this book means that each chapter identifies key issues that need to be considered in shaping domestic, regional and international responses, including the complex causes of movement, the conceptualisation of migration responses to climate change, the terminology that should be used to describe those who move, and attitudes to migration that may affect decisions to stay or leave. The book will help to facilitate the creation of principled, research-based responses, and establish climate-induced displacement as an important aspect of both the climate change and global migration debates
