

1. Record Nr.	UNINA9910791938703321
Autore	Marcus Eric <1968->
Titolo	Rational causation [[electronic resource] /] / Eric Marcus
Pubbl/distr/stampa	Cambridge, Mass., : Harvard University Press, 2012
ISBN	0-674-06533-6 0-674-06874-2
Descrizione fisica	1 online resource (279 p.)
Classificazione	CC 5500
Disciplina	122
Soggetti	Act (Philosophy) Agent (Philosophy) Causation
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Frontmatter -- Contents -- Introduction -- 1. Rational Explanation of Belief -- 2. Rational Explanation of Action -- 3. (Non-Human) Animals and Their Reasons -- 4. Rational Explanation and Rational Causation -- 5. Events and States -- 6. Physicalism -- Acknowledgments -- Index
Sommario/riassunto	We explain what people think and do by citing their reasons, but how do such explanations work, and what do they tell us about the nature of reality? Contemporary efforts to address these questions are often motivated by the worry that our ordinary conception of rationality contains a kernel of supernaturalism-a ghostly presence that meditates on sensory messages and orchestrates behavior on the basis of its ethereal calculations. In shunning this otherworldly conception, contemporary philosophers have focused on the project of "naturalizing" the mind, viewing it as a kind of machine that converts sensory input and bodily impulse into thought and action. Eric Marcus rejects this choice between physicalism and supernaturalism as false and defends a third way. He argues that philosophers have failed to take seriously the idea that rational explanations postulate a distinctive sort of causation-rational causation. Rational explanations do not reveal the same sorts of causal connections that explanations in the natural sciences do. Rather, rational causation draws on the theoretical and practical inferential abilities of human beings. Marcus defends this

position against a wide array of physicalist arguments that have captivated philosophers of mind for decades. Along the way he provides novel views on, for example, the difference between rational and nonrational animals and the distinction between states and events.
