1. Record Nr. UNINA9910792069803321 Neonatal neural rescue: a clinical guide / / edited by A. David Edwards, Titolo Denis V. Azzopardi, Alistair J. Gunn; foreword by Joseph J. Volpe [[electronic resource]] Cambridge:,: Cambridge University Press,, 2013 Pubbl/distr/stampa **ISBN** 1-107-23880-3 1-107-32718-0 1-107-33362-8 1-107-33694-5 1-107-33279-6 1-107-33528-0 1-139-56505-2 1-299-25758-5 Descrizione fisica 1 online resource (ix, 234 pages) : digital, PDF file(s) Collana Cambridge Medicine Neonatal neural rescue Disciplina 617.4/81044 Soggetti Brain - Wounds and injuries - Complications Pediatric neurology Asphyxia neonatorum Brain damage - Treatment Lingua di pubblicazione Inglese **Formato** Materiale a stampa Monografia Livello bibliografico Note generali Title from publisher's bibliographic system (viewed on 05 Oct 2015). Nota di bibliografia Includes bibliographical references and index. Nota di contenuto section 1. Scientific background -- section 2. Clinical neural rescue -section 3. The future. Sommario/riassunto Worldwide more than one million babies die annually from perinatal asphyxia and its associated complications such as neonatal encephalopathy - one of the major causes of cerebral palsy and cognitive deficiencies in children aside from prematurity. Cooling the head - or the entire body - minimizes neuronal death, enabling the neonatal brain to be 'rescued' thus greatly improving developmental outcomes. Hypothermic neural rescue therapy has revolutionized the treatment of this condition and is a major recent achievement in neonatal medicine. This landmark book provides a brief scientific

underpinning of hypothermic neural rescue therapy and lays out the evidence base for good practice. Internationally recognized authorities give practical advice, drawn from personal experience, on how to deliver hypothermia in the neonatal intensive care unit. A valuable addition to any neonatal unit, this is essential reading for neonatologists, neonatal nurses and paediatric neurologists.
