Sommario/riassunto	This book provides a case-based illustrative approach to the understanding and management of common and important sleep disorders, including snoring and sleep disordered breathing, insomnia and circadian-rhythm disorders, as well as primary neurological sleep disorders. Case histories are written by well-established experts from University College London Hospitals who have long-standing experience of providing a multi-disciplinary approach to the management of sleep disorders. Cases focus on the recognition of presenting features of sleep disorders and their clinical importance, using real life

Sommario/riassunto

Assessment of risk and uncertainty is crucial for natural hazard risk management, facilitating risk communication and informing strategies to successfully mitigate our society's vulnerability to natural disasters. Written by some of the world's leading experts, this book provides a state-of-the-art overview of risk and uncertainty assessment in natural hazards. It presents the core statistical concepts using clearly defined terminology applicable across all types of natural hazards and addresses the full range of sources of uncertainty, the role of expert judgement and the practice of uncertainty elicitation. The core of the book provides detailed coverage of all the main hazard types and concluding chapters address the wider societal context of risk management. This is an invaluable compendium for academic researchers and professionals working in the fields of natural hazards science, risk assessment and management and environmental science and will be of interest to anyone involved in natural hazards policy.
