The score: methods 5-theory 215 Mental chronometry: long past, bright future; 16 A life in grey areas: cognitive gerontology from 1957 to 2007; 17 From little slips to big disasters: an error quest; 18 Visual perception 1950-2000; 19 Human performance: from then to now; 20 The perception of time; 21 From effects to systems in neuropsychology; 22 Experimental psychopathology and psychological treatment; Index;
Sommario/riassunto	Psychology is a comparatively young science. From its origins in the psychophysics laboratories of late 19th century Germany, it made great strides throughout the 20th century, and can now be considered one of the most rapidly growing of the sciences, as evidenced by the

enormous growth at both undergraduate level and research level. This book takes a step back to consider just how we got to where we are in psychology. It brings together some of the leading and most influential figures from the past 50 years, covering neuropsychology, social psychology, experimental psychology, perception,
