

1. Record Nr.	UNINA9910792459103321
Autore	Sirignano W. A.
Titolo	Fluid dynamics and transport of droplets and sprays // William A. Sirignano [[electronic resource]]
Pubbl/distr/stampa	Cambridge : , : Cambridge University Press, , 2010
ISBN	1-107-21145-X 1-5231-1335-9 1-282-48672-1 9786612486722 0-511-80672-8 0-511-67445-7 0-511-67239-X 0-511-67564-X 0-511-67112-1 0-511-67366-3
Edizione	[Second edition.]
Descrizione fisica	1 online resource (xviii, 462 pages) : digital, PDF file(s)
Disciplina	660/.294515
Soggetti	Spraying Atomization
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Title from publisher's bibliographic system (viewed on 05 Oct 2015).
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Introduction -- Isolated spherically symmetric droplet vaporization and heating -- Convective droplet vaporization, heating, and acceleration -- Multicomponent-liquid droplets -- Droplet behavior under near-critical, transcritical, and supercritical conditions -- Droplet arrays and groups -- Spray equations -- Computational issues -- Spray applications -- Spray interactions with turbulence and vortical structures -- Film vaporization -- Stability of liquid streams.
Sommario/riassunto	This book serves as both a graduate text and a reference for engineers and scientists exploring the theoretical and computational aspects of the fluid dynamics and transport of sprays and droplets. Attention is given to the behavior of individual droplets, including the effects of forced convection due to relative droplet-gas motion, Stefan convection

due to the vaporization or condensation of the liquid, multicomponent liquids (and slurries), and internal circulation of the liquid. This second edition contains more information on droplet-droplet interactions, the use of the mass-flux potential, conserved scalar variables, spatial averaging and the formulation of the multi-continua equations, the confluence of spatial averaging for sprays and filtering for turbulence, direct numerical simulations and large-eddy simulations for turbulent sprays, and high-pressure vaporization processes. Two new chapters introduce liquid-film vaporization as an alternative to sprays for miniature applications and a review of liquid-stream distortion and break-up theory.
