Sommario/riassunto	This text on survival analysis methods contains the following chapters: 1 Introduction to Survival Analysis 2 Kaplan-Meier Survival Curves and the Log-Rank Test 3 The Cox Proportional Hazards Model and Its Characteristics 4 Evaluating the Proportional Hazards Assumption 5 The Stratified Cox Procedure 6 Extension of the Cox Proportional Hazards Model for Time- Dependent Variables Each chapter contains a presentation of its topic in "lecture-book" format together with objectives, an outline, key formulae, practice exercises, and a test. The "lecture-book" has a sequence of illustrations and formulae in the left column of each page and a script in the right column. This format allows you to read the script in conjunction with the illustrations and formulae that highlight the main points, formulae, or examples being presented. The reader may also purchase directly from the author audio cassette tapes of each chapter. The use of the audiotape with the illustrations and formulae, ignoring the script, is intended to be

similar to a lecture. Tapes may be obtained by writing or calling the author at the following address: Department of Epidemiology, Rollins School of Public Health, Emory University, 1518 Clifton Rd. N. E. , Atlanta, GA 30322; phone (404) 727-9667. This text is intended for self-study.
