Sommario/riassunto	"While traditional studies of dress and jewellery have tended to focus

purely on reconstruction or descriptions of style, chronology and typology, the social context of costume is now a major research area in archaeology. This refocusing is largely a result of the close relationship between dress and three currently popular topics: identity, bodies and material culture. Not only does dress constitute an important means by which people integrate and segregate to form group identities, but interactions between objects and bodies, quintessentially illustrated by dress, can also form the basis of much wider symbolic systems. Consequently, archaeological understandings of clothing shed light on some of the fundamental aspects of society, hence our intentionally unconditional title. *Dress and Society* illustrates the range of current archaeological approaches to dress using a number of case studies drawn from prehistoric to post-medieval Europe. Individually, each chapter makes a strong contribution in its own field whether through the discussion of new evidence or new approaches to classic material. Presenting the eight papers together creates a strong argument for a theoretically informed and integrated approach to dress as a specific category of archaeological evidence, emphasising that the study of dress not only draws openly on other disciplines, but is also a sub-discipline in its own right. However, rather than delimiting dress to a specialist area of research we seek to promote it as fundamental to any holistic archaeological understanding of past societies"--Publisher description.

Sommario/riassunto	This brief provides approaches to help family caregivers understand the role of caregiving, its challenges and consequences. Using real life case examples, it illustrates the essentials of family caregiving. The caregiving role can be a source of caregiver stress and can become increasingly burdensome. People are now living longer and acquiring chronic diseases, which makes it necessary to involve caregivers to assist in disability care for longer periods of time, and live out their end-time at home, which means caregivers are more and more needed, especially at the end-of-life. This brief illustrates the role and scope of caregiving and its future growth. It is useful to physicians, social workers, sociologists, psychologists, nurses, public health, public

policy and families and has a broad appeal for use in courses on Death and Dying.n>.
