Sommario/riassunto	Human Origins brings together new thinking by social anthropologists and other scholars on the evolution of human culture and society. No other discipline has more relevant expertise to consider the emergence

of humans as the symbolic species. Yet, social anthropologists have been conspicuously absent from debates about the origins of modern humans. These contributions explore why that is, and how social anthropology can shed light on early kinship and economic relations, gender politics, ritual, cosmology, ethnobiology, medicine, and the evolution of language.--

Sommario/riassunto	This book contains original, peer-reviewed, and selected research papers that were presented at the 2023 International Conference on

Marine Equipment & Technology and Sustainable Development, which took place in Beijing, China on April 1st 2023. The papers cover a range of topics, including but not limited to: the vision and goals of building a maritime community with a shared future, marine machinery and transportation, marine ecology, environmental protection and conservation, marine safety, future ships and marine equipment, marine engineering, marine information and technology, maritime policy, and global governance. The papers included in this volume provide the latest findings on methodologies, algorithms, and applications in marine equipment and technology, as well as sustainable development. As a result, this book is an invaluable resource for researchers, engineers, and university students who are interested in these fields.
