Sommario/riassunto	A human economy puts people first in emergent world society. Money is a human universal and now takes the divisive form of capitalism. This book addresses how to think about money (from Aristotle to the daily news and the sexual economy of luxury goods); its contemporary evolution (banking the unbanked and remittances in the South, cross-

border investment in China, the payments industry and the politics of bitcoin); and cases from 19th century India and Southern Africa to contemporary Haiti and Argentina. Money is one idea with diverse forms. As national monopoly currencies give way to regional and global federalism, money is a key to achieving economic democracy.
