Disciplina	930.10285
Soggetti	Animal remains (Archaeology) - Economic aspects Animal remains (Archaeology) Economics, Prehistoric Human-animal relationships - History Plant remains (Archaeology) Plant remains (Archaeology) - Economic aspects Human-animal relationships History
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	Economic archaeology is the study of how past peoples exploited animals and plants, using as evidence the remains of those animals and plants. The animal side is usually termed zooarchaeology, the plant side archaeobotany. What distinguishes them from other studies of ancient animals and plants is that their ultimate aim is to find out about human behaviour - the animal and plant remains are a means to this end. The 33 papers present a wide array of topics covering many areas of archaeological interest. Aspects of method and theory, animal bone identification, human palaeopathology, prehistori.
