| Note generali           | P29119-2-FDIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Sommario/riassunto      | <p>The purpose of the ISO/IEC/IEEE 29119 series of software testing standards is to define an internationally-agreed set of standards for software testing that can be used by any organization when performing any form of software testing. ISO/IEC/IEEE 29119-2 comprises test process descriptions that define the software testing processes at the organizational level, test management level and dynamic test levels. It supports dynamic testing, functional and non-functional testing, manual and automated testing, and scripted and unscripted testing. The processes defined in ISO/IEC/IEEE 29119-2 can be used in conjunction with any software development lifecycle model. Since testing is a key approach to risk-mitigation in software development, ISO/IEC/IEEE 29119-2 follows a risk-based approach to testing. Risk-based testing is a common industry approach to strategizing and managing testing. Risk-based testing allows testing to be prioritized and focused on the most important features and functions. Keywords: 29119, 29119-1, software testing, Test Planning Process, Test Plan, verification and validation.</p> |

The 1960s&lt;BR&gt;Chapter 8 Violence and carnival: renegotiating public space 1970-2008&lt;BR&gt;Chapter 9 Shared space or divided future? &lt;BR&gt;Conclusion Public space -- past lessons and future strategies&lt;BR&gt;Index |
| Sommario/riassunto      | Civic identity and public space, focussing on Belfast, and bringing together the work of a historian and two social scientists, offers a new perspective on the sometimes lethal conflicts over parades, flags and other issues that continue to disrupt political life in Northern Ireland. It examines the emergence during the nineteenth century of the concept                                                                                                                                                                                                             |

of public space and the development of new strategies for its regulation, the establishment, the new conditions created by the emergence in 1920 of a Northern Ireland state, of a near monopoly of public space enjoyed by Protestants and unionists, and the break down of that monopoly in more recent decades. Today policy makers and politicians struggle to devise a strategy for the management of public space in a divided city, while endeavouring to promote a new sense of civic identity that will transcend long-standing sectarian and political divisions.

| Sommario/riassunto      | Die Integration der haustechnischen Anlagen ist ein wichtiger Aspekt bei der Planung des Architekten. Die Konzeptionierung von Versorgungssträngen und Kreisläufen im Gebäude erfordert ein Verständnis für die Zusammenhänge der Ver- und Entsorgung mit dem |

Element Wasser. Hierbei geht es vor allem um die Zusammenhänge der einzelnen Kreislaufelemente von der Versorgung mit Trinkwasser, den Verbrauchern im Haus und der Entsorgung von Abwasser bis hin zur Wiedernutzbarmachung von Abwässern. Das Thema der Wassereinsparung bildet dabei einen übergeordneten Rahmen. Themen: Anforderungen an Trinkwasser Versorgungsanschlüsse und Verteilungsnetze im Haus Abwasserentsorgung und -nutzung Umgang mit Regenwasser Ressourcenschonender Umgang

The integration of building services is an important aspect of architectural planning. The conceptual design of supply systems and cycles within the building demands a solid grasp of the relationships that underpin the supply and disposal of the element water. The focus here is on relations among the individual elements of the cycle, from the supply of drinking water, consumers inside the building, and the disposal of wastewater to the rehabilitation of wastewater. The subject of water conservation is present throughout as an overarching framework. Topics: Requirements for drinking water Supply connections and distribution networks in the building Wastewater disposal and use Dealing with rainwater Resource-friendly approaches
