### Sommario/riassunto

The international community has come together to pursue certain fundamental, common goals over the coming period to 2030 to make progress toward ending poverty and hunger, improving social and economic well-being, preserving the environment and combating climate change, and maintaining peace. The Sustainable Development Goals (SDGs) have been agreed to by states, which have in turn adopted national targets and action plans. This volume studies the governance and implementation of these goals in Southeast Asia, in particular the difficulties in the shift from the international to the national, the multi-level challenges of implementation, and the involvement of stakeholders, civil society, and citizens in the process. Contributors to this volume are scholars from across Southeast Asia who research these issues in developing (Cambodia, Laos, Myanmar), middle-income (Indonesia, Malaysia, Philippines, Thailand, Vietnam), and developed countries (Brunei, Singapore) in the region. The perspectives on governance and the SDGs emerge from the fields of political science, international relations, geography, economics, law, health, and the natural sciences.
