Disciplina	230
Soggetti	Christianity - Essence, genius, nature Christianity Nonviolence - Religious aspects - Christianity Government, Resistance to - Religious aspects - Christianity
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Sommario/riassunto	Tolstoy's The Kingdom of God Is Within You is a fascinating work, from both a religious and a historical perspective. In the book he outlines a radical reorganization of society based on a literal translation of Christianity. Not in a Holy Roller sort of way but in an actual ""What would Jesus do?"" sort of way, banning war and murder and following the teachings of Christ to a 'T'. This book would have a profound effect on Gandhi, who after reading it was turned on to the idea of liberating his people from British rule. Tolstoy wrote to Gandhi in a letter titled ""A letter to a Hindu,"" in

2. Record Nr.	UNINA9910793663103321
Titolo	Peripheral vascular disease : a clinical approach / / [edited by] Carlos Mena, Sasanka Jayasuriya
Pubbl/distr/stampa	Philadelphia, Pennsylvania : , : Wolters Kluwer, , [2020] ©2020
ISBN	1-4963-4942-3
Descrizione fisica	1 online resource (490 pages) : illustrations
Disciplina	616.131
Soggetti	Peripheral vascular diseases - Treatment
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Sommario/riassunto	"Peripheral vascular disease refers to a cluster of conditions in which atherosclerosis (narrowing of the blood vessel wall) occurs in the peripheral vascular system, especially in the legs, causing significant disability and risk of amputation and infection. The worldwide prevalence of peripheral vascular disease, also known as peripheral arterial disease, increased 24% from 2000-2010, with about 70% of sufferers living in low to mid income regions. Approximately 202 million people suffered from peripheral vascular disease in 2010, with about 27 million in Europe and North America; 55 million in South East Asia; and 46 million in the Western Pacific region. Key risk factors include smoking, diabetes, hypertension, and high cholesterol. Given that peripheral vascular disease is more common in those over 60 years old, the incidence of disease is expected to grow as the population continues to age. Despite these statistics, many interventional cardiology fellowship programs do not include training on peripheral vascular interventions"--Provided by publisher.
