Sommario/riassunto	"Acquired Language Disorders: A Case-Based Approach, Third Edition, is a practical, easy-to-follow, informative guide for students and clinicians. The authors present each case from an impairment-based perspective with practical application to improving activities of daily living, as well as a social interactive perspective to create a wholistic picture of each case. For people with aphasia, clinicians are encouraged to consider not only language but also executive functions, attention, memory, and visuospatial skills. Information in the text coordinates the

assessment process to a treatment plan informed by the Aphasia: Framework for Outcome Measurement (A-FROM) model, an expansion from the World Health Organization (WHO) International Classification of Functioning, Disability and Health (ICF). This edition begins with a review of the basics of brain-behavior relationships and pertinent medical terminology for treating individuals who have a neurological impairment. Each disorder is then introduced in a case-based format that includes a case scenario with a photo, functional analysis of the patient, critical thinking/learning activities, a diagnostic profile, the new Target Assessment Snapshot, treatment considerations, and a Venn diagram of the A-FROM Model with patient goals for each case. Special features include "Test Your Knowledge" sections based on 10 patient scenarios along with an answer key, a Quick Reference Diagnostic Chart for ALDs, and a Functional Communication Connections Worksheet for treatment planning purposes"--
