Record Nr.	UNINA9910794004903321
Autore	Petrera Matteo
Titolo	Mathematical physics . II Classical statistical mechanics, lecture notes / / Matteo Petrera
Pubbl/distr/stampa	Berlin : , : Logos Verlag, , [2014] ©2014
ISBN	3-8325-8740-3
Descrizione fisica	1 online resource (176 pages)
Disciplina	530.13
Soggetti	Statistical mechanics Mathematical physics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	PublicationDate: 20140915
Sommario/riassunto	Long description: These Lecture Notes provide an introduction to classical statistical mechanics. The first part presents classical results, mainly due to L. Boltzmann and J.W. Gibbs, about equilibrium statistical mechanics of continuous systems. Among the topics covered are: kinetic theory of gases, ergodic problem, Gibbsian formalism, derivation of thermodynamics, phase transitions and thermodynamic limit. The second part is devoted to an introduction to the study of classical spin systems with special emphasis on the Ising model. The material is presented in a way that is at once intuitive, systematic and mathematically rigorous. The theoretical part is supplemented with concrete examples and exercises.
